

Avenue Model Viewer

□

"OMG - Look at this" said one of the eSpline Portal customers when they saw their first VC Model displayed in HTML

eSpline's Avenue Model Viewer is one of a very few software tools that document a SAP VC or IPC product model. It was created as a part of the eSpline [Managing VC & IPC](#) initiative so that there is a easy to use and easy to read documentation of an SAP Variant Configurator or Internet Pricing Configurator product model
